

Cayque Gastón Cicarelli

Game Developer | Gameplay Programmer & QA | Ren'Py • Godot • Unity

São Paulo, Brazil (open to remote) | +55 11 91719-7472 | cayquecicarelli@gmail.com

[linkedin.com/in/cayque-cicarelli](https://www.linkedin.com/in/cayque-cicarelli) | neonbrasil.github.io/cayque | github.com/NeonBrasil

Game developer and Computer Science graduate, sole developer of a commercial visual novel for a US studio. Experienced in gameplay systems, branching narrative, UI and accessibility in Ren'Py and Python, with team projects in Godot and Unity. An information security background adds to my QA work: manual testing, reproducing and documenting bugs, and analyzing logs. I care about engaging mechanics and easter eggs. Fluent English, used daily at work.

Experience

Lead Developer (Freelance) — Letterflux Studios (US) | Remote | Mar 2026 – Present

A Week to Remember, a commercial visual novel in Ren'Py/Python; full release planned for 2027 ([Steam page](#)).

- Sole developer on a 10-person team; also give input and analysis on the project.
- Did the full software engineering before coding began; handle docs, builds (Git, Scrum), bug identification, and optimization.
- Designed and built the gameplay systems: choices and branching with 5 endings so far, structured to support 20+.
- Programmed the core mechanics: spell crafting, point-and-click exploration, and a functional in-game phone.
- Tuned narrative pacing and decision flow so player choices stay consistent and clearly shape story outcomes.
- Ran closed pre-alpha and alpha playtests on itch.io for testers who signed up via Discord (150+ downloads), turning feedback and bug reports into iterations. The game has nearly 500 wishlists.
- Built the full GUI with accessibility: alt text, closed captions, gamepad support, and high contrast.
- On Steam (second-level access), translated the store page and uploaded the game files; now studying DRM, controller compatibility, and in-game translation.

Information Security Intern — Edenred Brasil | São Paulo, Brazil | Mar 2024 – Dec 2025

- Analyzed data in Splunk (SPL) and identified a critical data leak via transfer-log patterns, then analyzed in Proofpoint.
- Administered and used Proofpoint DLP (about 90% of Edenred Brasil's analyses in the tool) and worked on over 100 incidents, reporting the cases by email to managers and directors.
- Created Awareness & Tech News, weekly security news and awareness posts on the company's internal social network, which reduced related incidents by over 30%.

Ruby on Rails Developer — Sankhya Jiva | Remote | Aug 2022 – May 2023

- Maintained and extended the company's main legacy web app (Ruby on Rails, JavaScript, SQL), shipping new features.

Projects

- **SPECTOR** (Unity, Naninovel, itch.io): Lead Programmer of a horror chat-sim game made with an international team for the Spooktober Visual Novel Jam 2026, released with updates still coming. Built the full game: programming, camera and lighting placement, logic, easter eggs, and some of the writing.
- **The New Year's School** (Godot, Steam): basic gameplay, UI testing, and network testing for a co-op multiplayer game, including checking whether it could be hacked to get its answers or to hack other players.

Skills

- **Engines:** Ren'Py, Godot (GDScript), Unity, Naninovel, RPG Maker (jam project in progress); Steam/itch.io publishing.
- **Programming:** Python, GDScript, JavaScript, SQL, Ruby on Rails, Git/GitHub.
- **QA & Testing:** manual testing, clear repro steps and bug reports, playtest planning, build verification, multiplayer network testing.
- **Design & Process:** software engineering, game flow, narrative balancing, creative writing, GUI/UX, accessibility, Agile/Scrum, technical docs.
- **Languages:** English (fluent), Portuguese (native), Spanish (intermediate).

Education & Additional

B.Sc. in Computer Science — Centro Universitário FEI | Dec 2025 | Capstone: AI algorithm to identify a specific type of deepfake

- Published author of *O Castelo da Imaginação* (2019), a fantasy novel for young readers.
- Volunteer: free math and computer classes; tech talks and support for families in need at São João Batista Parish.
